Monetize your knowledge

Prediction Markets(PM) allow traders to wager on Yes/No outcomes for various events:
Politics, Sports, Stocks, Weather, Information, etc.

Existing decentralized PMs have design flaws that result in low liquidity and uncompetitive rewards.

Elision redesigns the trading and rewards mechanisms, creating a sturdy foundation focused on enabling 3rd parties to launch their own PM brands.

Competitive Misalignment Liquidity Providers(LP)

Current design demands a unique level of care that LPs don't expect

Uncertain volume

Each market requires liquidity for both Yes and No tokens- limiting LP rewards to the **unknown future volume of that market.**

Loss by design

Trader interaction changes the value of its Yes/No tokens- causing **guaranteed impermanent loss.**

Active management

Upon expiration, the losing side's token price becomes 0- requiring LPs to **preemptively close their positions.**

Liquidity Solution

Market-Agnostic Liquidity

Elision lifts liquidity to the network level, protecting LPs from being impacted by market-level events.

This presents a familiar liquidity pool setup, reducing participation barriers and allowing Elision to compete for organic liquidity.

Competitive Misalignment Traders

Current rewards structure does not meet the needs of modern crypto traders

Low availability

Market availability is determined by the actions of liquidity providers- creating a **limited selection** for traders.

No passive yield

No additional rewards are generated from locked funds within markets- causing **lost opportunity** for participants.

Conditional rewards

Industry has shifted towards veiled models that 'always' reward- implying **chance of loss as uncompetitive**.

Market Fit Solution

Flexible Rewards

Elision repositions the product from an “all-or-nothing” outcome by adding a sustainable passive rewards system that mitigates losses and amplifies winnings.

This allows traders gain yield from locking their funds regardless of the market outcome, providing a comparable staking experience while maintaining the speculative identity of a PM.

Strategic Pillars

Decentralization Focus

Turn-Key

Elision handles the technical network complexities, simplifying operational requirements and **reducing barriers to entry** for Market Makers(MM).

Independent

After decentralized provisioning, MMs have minimal oversight over running their brand and setting competitive trading commissions.

Value Generation

TVL Yield

Elision does not take any trading commission, instead sharing rewards from **risk-free staking** of open value within unresolved markets.

Own Liquidity

Once traction is achieved, Elision will use the growing treasury to provide its own liquidity, decreasing reliance on external LPs while generating value.
